 CALL FOR ABSTRACTS

HTSHFF is a vibrant workshop where scientists, engineers, students and industrial developers gather together to discuss all aspects of high-temperature, low-temperature, conventional and unconventional superconductors in high frequency fields, from fundamentals to applications, with a special attention to superconducting devices, original measuring methods and low temperature equipment in high-frequency fields, relevance of superconductors in high frequency fields to cutting edge experiments. Strong focus is placed on exchange of information, with ample discussions devoted to cross-fertilization of different fields of academic and industrial research, the common language of superconductivity and high frequency electromagnetic fields, from rf to microwaves to THz.

The Committee of the 15th International Workshop On High-Temperature Superconductors in High Frequency and Fields welcomes the submission of high-quality abstracts focusing on the following variety of topics:

- Superconducting microwave devices.
- Fundamental physics at Microwave and Terahertz frequencies.
- Superconducting electronics and measurements for Quantum computing.
- Properties of materials for microwave applications.
- Superconducting microwave electronics.
- Superconducting metrology from radiofrequency to Terahertz.
